3. SonarQube Quality Gate

The screenshot shows the SonarQube Community web interface. At the top, the browser address bar shows the URL `15.252.98.24:9000/projects/create`. A warning banner states: "Embedded database should be used for evaluation purposes only. It doesn't support scaling, upgrading to a new SonarQube Server version, or migration to another database engine. [Learn more](#)". The SonarQube Community logo is on the left, and navigation links for Projects, Issues, Rules, Quality Profiles, Quality Gates, Administration, and More are in the center. A search bar and user profile icon are on the right. The main heading is "How do you want to create your project?". Below it, a question asks if the user wants to benefit from all features like repository import and Pull Request decoration. The next heading is "Create your project from your favorite DevOps platform.", followed by the instruction "First, you need to set up a DevOps platform configuration." There are six buttons arranged in two rows: "Import from Azure DevOps", "Import from Bitbucket Cloud", "Import from Bitbucket Server", "Import from GitHub", and "Import from GitLab", each with a "Setup" button. At the bottom, a question asks "Are you just testing or have an advanced use-case?", with a button labeled "Create a local project".
